

Project Report: Uber Stock Analysis Using Pivot Tables & Excel Dashboard

1. Project Overview

This project focuses on analyzing Uber's historical stock market data to understand its price movements, trading volume behavior, and long-term growth trends. Using Excel, pivot tables, and dashboard techniques, the goal was to extract meaningful insights for financial analysis and decision-making.

2. Objectives of the Project

The project aimed to:

1. Identify **monthly average adjusted close prices**.
2. Examine **trading volume trends** over time.
3. Study **yearly performance trends** in the stock price.
4. Build a dynamic dashboard to visualize stock activity and KPIs.

3. Tools & Techniques Used

Excel

- Pivot Tables
- Pivot Charts
- Dynamic Filters / Slicers
- Calculated Fields
- Dashboard Design

4. Data Analysis Performed

a) KPI Calculations

The KPI sheet outlines four major financial indicators:

1. **Monthly Average Adjusted Close Price**
2. **Volume Over Time**

3. Yearly Trends in Adjusted Close Price

4. Trading Volume Analysis

b) Pivot Table Insights

Using pivot tables, we extracted:

- **Monthly Adjusted Close Price**

- Shows how Uber's stock performs across different months.
- Identifies strong and weak periods in the year.

- **Daily & Weekly Volume Trend**

- Helps understand which weekdays have maximum trading activity.
- Monday–Wednesday showed noticeably higher trading activity in many months.

- **Yearly Close Price Trend**

- Helps in analyzing overall growth of the company's stock.
- Useful for long-term investors.

- **Summary Statistics (Avg Open, Close, High, Low)**

5. Dashboard Components

The dashboard consolidates all the pivot results into an interactive view:

- **Monthly Average Adjusted Close Line Chart**

Shows cyclic and seasonal stock movement.

- **Volume Over Time Chart**

Indicates demand and trading interest across months and years.

- **Yearly Adjusted Close Trend**

A clear visual of year-over-year performance.

- **Trading Volume by Month/Year**

Useful for understanding liquidity trends.

- **Slicers**

Slicers used for:

- Year
- Month
- Trading Metrics

6. Key Insights Identified

- Certain months consistently show higher adjusted close prices.
- Trading volume spikes on specific weekdays, indicating trader behavior.
- Year-over-year adjusted close price trends show progressive growth periods and correction phases.
- The stock experiences visible volatility based on market cycles.

7. Conclusion

This project demonstrates strong skills in:

- Financial data analysis
- Pivot table summarization
- Chart creation
- Dashboard building
- Interpreting trends in stock market datasets
